Skipjack THOMAS W. CLYDE

Architectural Survey File

This is the architectural survey file for this MIHP record. The survey file is organized reverse-chronological (that is, with the latest material on top). It contains all MIHP inventory forms, National Register nomination forms, determinations of eligibility (DOE) forms, and accompanying documentation such as photographs and maps.

Users should be aware that additional undigitized material about this property may be found in on-site architectural reports, copies of HABS/HAER or other documentation, drawings, and the “vertical files” at the MHT Library in Crownsville. The vertical files may include newspaper clippings, field notes, draft versions of forms and architectural reports, photographs, maps, and drawings. Researchers who need a thorough understanding of this property should plan to visit the MHT Library as part of their research project; look at the MHT web site (mht.maryland.gov) for details about how to make an appointment.

All material is property of the Maryland Historical Trust.

Last Updated: 10-02-2003

THOMAS W. CLYDE (skipjack)

Wenona, Maryland

THOMAS W. CLYDE is a 54.4' long two-sail bateau, or V-bottomed deadrise type of centerboard sloop, commonly referred to as a skipjack. She has a beam of 18.2', a depth of 5.3', and a net registered tonnage of 21. She carries a typical skipjack rig of jib-headed mainsail and a single large jib with a club on its foot. Built in 1911 in Oriole, Maryland following traditional Bay design and construction methods, THOMAS W. CLYDE is significant as being one of the 35 surviving traditional Chesapeake Bay skipjacks and a member of the last commercial sailing fleet in the United States. THOMAS W. CLYDE is of special interest as being one of the larger skipjacks and for being one of the 19 surviving working skipjacks to have been built previous to 1912.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This vessel is a 54.4' long, two-sail bateau, or V-bottomed deadrise type of centerboard sloop, commonly referred to as a skipjack. Built in 1911 in Oriole, Maryland for the oyster fishery, she continues active as a sailing dredgeboat. The vessel has a beam of 18.2', a depth of 5.3', and a net register tonnage of 21. She carries a typical skipjack rig of jib-headed mainsail and large boom. She has a longhead bow with headrails and a square, transom stern. Her wooden hull is painted the traditional white.

THOMAS W. CLYDE has a straight, slightly raking stem with a longhead. Headrails-- wooden braces--extend from the end of the longhead back to the hull. Her square stern is boxy. The vessel shows typical Bay-area cross-planked construction methods. Her rudder is carried outboard on the transom with a chock for the pushboat located to one side. There are guards amidships to protect the hull from the bumping of the dredges, and metal ice sheathing at the waterline.

The single mast is set up with double shrouds and turnbuckles, as well as a forestay, jibstay, and topping lift. There are lazyjacks on the sails for easier furling. The mainsail is laced to the boom and carried on wood hoops at the mast; the boom is jawed to the mast. A large jib, with a club along its foot, is rigged out to the bowsprit, which is long and octagonal, painted white with brightwork toward the end and a white tip. The bowsprit is rigged with double chain bobstays and chain bowsprit shrouds. There are headrails from the end of the longhead back to the hull. In addition to the sail rig, the vessel carries a motorized pushboat suspended from davits over the stern.

The skipjack is flush-decked, with a wheelbox at the after rail, a tall cabin trunk, and a box over the winder engine. Decks are surrounded with a pinrail forward and a higher pinrail aft, but open with dredge rollers amidships. Dredging gear is carried in season.

The white-painted hull is decorated with a tan-trimmed pinrail. Trailboards mounted on the longhead have the vessel's name in gold with vines and leaves, along with an eagle/shield/arrows motif in red, white, and blue, all on a dark green background. Nameboards on the hull have the name THOMAS W. CLYDE in gold on a dark ground.

Prepare both a summary paragraph of significance and a general statement of history and support.

This vessel is significant as being one of the 35 surviving traditional Chesapeake Bay skipjacks and a member of the last commercial sailing fleet in the United States. Out of a fleet of hundreds of skipjacks that worked Bay waters in the early years of this century today only this small number remain to carry on the tradition of working sail.

The skipjack evolved as a distinct type of Bay vessel in the 1890s as a cheaper-to-construct alternative to the earlier bugeyes and other traditional framed craft, in a period when shipbuilding costs were rising and the oyster catch was diminishing. The type was devised by enlarging (to 25 to 60 feet) the hull of the ordinary, unframed, square-sterned crabbing skiff, and giving it a deadrise bottom, a deck, a cabin, and a sloop rig.

The result—with its unframed, hard chine, cross-planked, V-bottom—proved inexpensive to build, easy to repair, and could be constructed by a competent house carpenter. Skipjacks were specifically designed as oyster dredge boats, with wide beams and low freeboard lending stability and providing a large working space on deck. The single masted rig, with sharp-headed mainsail and large jib, was easy to handle, powerful in light winds, and handy in coming about quickly for another pass over the oyster beds.

The Maryland oyster season begins November 1 and ends March 15. Skipjacks must dredge under sail on all days except Mondays and Tuesdays, when they are allowed to use their motorized pushbot for dredging. The pushboat, normally carried on davits at the stern, is lowered into the water and literally "pushes" the skipjack along from behind, the nose of the pushboat resting against a "jig" on the stern of the skipjack. The pushboat can also legally be used to get the skipjack to and from the oyster beds each day. Each skipjacks' crew is made up of the captain, who is often also the owner, and five crew members.

THOMAS W. CLYDE is of interest as being one of the older skipjacks still dredging in the Chesapeake fleet. She was built in 1911 in Oriole, Md. following traditional Bay-area design and construction methods. She has worked in the oyster-dredging fleet since her building and is presently based at Deal Island. The vessel is one of the 19 surviving working skipjacks to have been built previous to 1912, although, like the other members of the fleet, she has been much repaired over the years in true Chesapeake fashion.
